

# LIGHTNING DIVERTER

DIVBS008

Datasheet

# THE STINGER DIVBS008 FENCE LIGHTNING DIVERTER

## 1. PURPOSE OF THIS DEVICE

To protect the energizer from excessive voltage surges during lightning

## 2. INSTALLATION

The device must be installed as close as possible to the energizer(s), between a live wire and ground. It must be stressed that the quality of this ground point (low earth resistance) will greatly affect the functionality of the diverter

## 3. SPECIFICATIONS

1. Each device is factory tested at a voltage of 16000 Volts. At this voltage it produces an arc, which acts to lead the excessive energy into earth.
2. The device is intended to divert the secondary energy during a lightning stroke.
3. The device has no polarity
